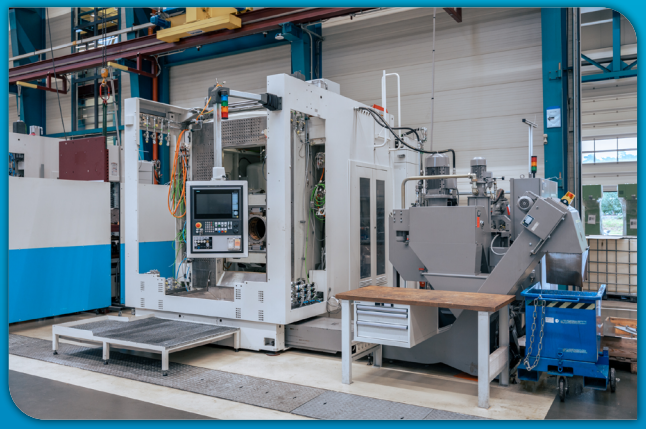
Retrofit, spare parts, maintenance & more

For us, machine service does not end with delivery. With a comprehensive after-sales service portfolio, we ensure that your production operates reliably for years to come.

Whether it is retrofitting, spare parts, preventive maintenance, or short-notice service support, our service team is always at your side, including for machines from other manufacturers.

Our service portfolio at ELHA-MASCHINENBAU covers the following areas:

- Machine modifications and retrofitting
- Genuine ELHA spare parts
- Repair services
- Preventive maintenance
- Used machines
- Training



ELHA maximizes machine availability through qualified service personnel, inspections, maintenance, and repair services. Fast and targeted overhauls or modifications to machining systems help reduce both costs and downtime.

WE MAKE MACHINES

We supply custom machining centers, special-purpose machinery, and manufacturing modules tailored to your needs. Many industries, including large bearing manufacturers, automotive OEMs, and their suppliers, rely on our experience and expertise in developing and implementing highly productive machining processes. We specialize in designing and manufacturing primarily cutting machine tools and turnkey solutions.

ELHA machines and our manufacturing solutions are highly productive, process-safe, and durable. Our enthusiastic professionals guide every step of your planned investment journey, extending well beyond the commissioning phase.

AFTER SALES SERVICE

Machine-related services

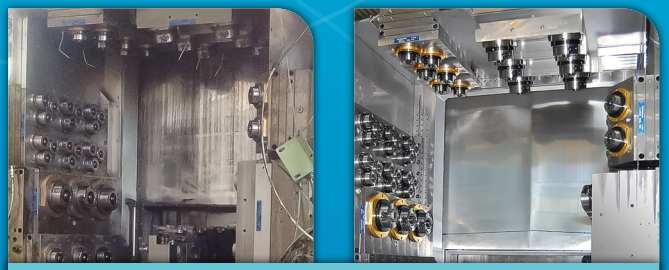
ELHA
RETROFIT

Overhauls | Modifications | Modernization

Products change, but machines remain. When products are redesigned or components are replaced, investing in a completely new production system is often not the most economical solution. Instead, a retrofit offers the opportunity to adapt existing manufacturing systems to new requirements efficiently and cost-effectively.

With experience from more than 100 successful machine modifications and complete overhauls, ELHA is your reliable partner for technical retrofits and modernization projects. Our range of services extends from targeted upgrades and partial mechanical or electrical overhauls to the complete modernization of entire production lines.

Before **After**



Production Module FM 4+X before and after an overhaul

Service overview

- Consulting & process engineering
- Complete or partial mechanical and/or electrical overhauls
- Recommissioning of modified systems, including process support
- Retooling for new or different workpieces
- Technical assistance throughout the entire project phase

Service

The ELHA service team, both in-house and on-site, provides fast response times to prevent machine-related downtime or reduce it to a minimum.

Our services include:

- International telephone support via our hotline, staffed by highly qualified specialists
- Inspections, maintenance, and repair services
- Repairs carried out by experienced service technicians
- Remote support
- Customized maintenance and service agreements
- Maintenance packages
- Fast and reliable response times
- Strong service partners in the USA and Asia

Training

ELHA offers professional training courses and programs to ensure the safe and efficient programming, setup, operation, and monitoring of your ELHA machines. We also provide specialized training for the preventive maintenance of mechanical and electrical components.

Original spare parts

We supply genuine ELHA spare parts quickly and reliably. Whether you require individual components, spare parts packages, or a forward-looking inventory strategy, we ensure that your production runs smoothly and efficiently.

Your benefits at a glance:

- Fast response times
- High spare parts availability
- Worldwide shipping
- Consignment stock management
- Customized spare parts recommendations
- Spare parts packages

Used machines

Choose a professionally refurbished used machine from ELHA. Through trade-ins and the targeted repurchase of customer equipment, we can offer a range of used machines. These machines can be overhauled and modified according to your specific requirements, providing a cost-effective solution without compromising on quality or performance.
