

AFTER SALES

Service for highest availability and productivity

Retrofitting

modification

rebuilding

complete refurbishment

Nowadays the life-cycle of manufacturing parts is significantly lower than the lifetime of modern machine tools.

In case of a product change, the retooling or retrofitting of an existing production line is a great and cost efficient alternative to a new investment.

Having done more than 100 machine modifications and complete machine retrofittings, we have an excellent experience in this field

In these regards we can offer a great scope of services from small machine extensions up to rebuilding/retrofitting of complete production lines.
